

Equity, fixed income and commodity exchange traded products

June 2018

For professional investors only

Our ETFs are UCITS funds designed to give you efficient and transparent exposure to equities, fixed income and commodities. For single commodities, we offer exchange traded commodities (ETCs). ETCs are debt securities rather than funds but aim to give you a comparable level of transparency and security. Visit our website for full product details, including codes for additional trading currencies.

Investors in these products should note that the price of your investment may go down as well as up. As a result you may not get back the amount of capital you invest. Your capital is at risk.

Key

- Smart beta:** index exposure based on factors or fundamentals rather than market capitalisation, typically designed to help you enhance returns or reduce risk.
- Active:** combining active management with the flexibility and transparency of ETFs.
- Thematic:** exposure to interesting themes that aren't captured by traditional sector classifications.

-
- P Physical:** the fund owns a portfolio broadly similar to the benchmark index or, in the case of active ETFs, a portfolio selected by the manager.
 - S Synthetic:** the fund owns a portfolio of listed securities, not necessarily from the benchmark index, and uses swap contracts with major banks to cover any difference between portfolio and index performance. This ensures very precise tracking. Exposure to swap counterparties is strictly controlled.
 - PB Physically-backed:** the relevant precious metal is held by a custodian on behalf of investors. Note that an exchange-traded commodity (ETC) is a type of debt security not a fund.
