Summary

The Fund has a sustainable investment objective to invest in global companies whose innovative technologies focus on advancing the use of hydrogen, fuel cells and the potential hydrogen economy hence facilitating a transition to a lower carbon economy. The Fund's portfolio is mainly composed of companies involved in renewable green hydrogen, improving hydrogen generation, its storage, conversion, uses in transportation, innovation and the advancement of fuel cells. The Fund achieves this objective by tracking the WilderHill Hydrogen Economy Index (the "Reference Index"), which has a methodology that is aligned with attaining the sustainable objective of the Fund. In order to achieve the investment objective, the Fund employs a replication method that looks to invest as far as possible and practicable in the constituents of the Reference Index.

Through a combination of the exclusion criteria detailed in the methodology of the Reference Index and the qualitative assessment and/or engagement of Invesco's ESG team, it is ensured that investee companies follow good governance practices. The Fund takes into account the PAI indicators defined in Table 1 of Annex I of the RTS and ensures alignment with the OECD guidelines and UNGP, thereby ensuring that the sustainable investments do not cause any significant harm to environmental and/or social objectives.

A minimum of 90% of the Fund's NAV will be in sustainable investments and are selected according to the binding elements of the investment strategy, on the basis that they align with the sustainable investment objective of the Fund. Up to 10% of the Fund's NAV will be invested in financial derivative instruments for hedging and/or efficient portfolio management purposes and cash for ancillary liquidity purposes.

The Manager monitors the tracking error of the Fund on an ongoing basis. The Manager also monitors and measures the Fund's performance on other metrics, using indicators such as the Fund's ESG score, ESG rating, carbon intensity and exclusion criteria, by aggregating data from the index provider, and third-party data providers. The Manager compares against the same indicators for the Reference Index to measure the attainment of the sustainable investment objective of the Fund.

In order to assess the quality of the index provider's data, the Manager carries out due diligence on the index provider prior to fund launch and on an ongoing, periodic basis. The Manager may also utilise data from other third-party data providers for comparison purposes, allowing the Manager to identify and challenge any inconsistencies. The Manager does not estimate any of the data or use any estimated data from third party data providers.

There are limitations to the data and methodologies used to measure the sustainable investment objective of the Fund, e.g. there may be insufficient data coverage by the index provider and third-party data providers, or there may be errors in the data from third party data providers, including index constituent data disseminated by the index provider. However, such limitations are not expected to have any material impact on the Fund's overall ability to attain the sustainable investment objective of the Fund which is met by tracking the Reference Index.

Invesco's engagement policy can be accessed [here](#) – 'Stewardship Report'.

Please refer to the index provider's website for input data, the methodologies used to select those data, the rebalancing methodologies and how the Reference Index is calculated: <https://www.solactive.com/>.

No significant harm to the sustainable investment objective

The index methodology of the Reference Index ensures that sustainable investments do not cause significant harm by implementing exclusion criteria that takes into account some of the principal adverse impacts (PAI) indicators defined in Table 1 of Annex I of the regulatory technical standards for Regulation 2019/2088 (RTS) and alignment with OECD guidelines and UNGP, such that securities that do not meet certain thresholds will be excluded from the Reference Index. The Fund also takes into account the RTS PAI indicators by using the qualitative research and/or engagement of Invesco's ESG team, to assess whether the sustainable investments of the Fund causes significant harm to the relevant environmental or social investment objective.

Sustainable investment objective of the financial product

The Fund has a sustainable investment objective to invest in global companies whose innovative technologies focus on advancing the use of hydrogen, fuel cells and the potential hydrogen economy hence facilitating a transition to a lower carbon economy. The Fund's portfolio is mainly composed of companies involved in renewable green hydrogen, improving hydrogen generation, its storage, conversion, uses in transportation, innovation and the advancement of fuel cells. The Fund achieves this objective by tracking the Reference Index, which has a methodology that is aligned with attaining the sustainable objective of the Fund.

Investment strategy

The investment objective of the Fund is to achieve the net total return performance of the Reference Index, less fees, expenses and transaction costs, thereby taking an approach that seeks to invest in companies whose innovative technologies focus on advancing the use of hydrogen, fuel cells and the potential hydrogen economy, hence facilitating a transition to a lower carbon economy.

In order to achieve the investment objective, the Fund will employ a replication method that looks to invest as far as possible and practicable in the constituents of the Reference Index. The Fund intends to replicate the Reference Index by holding all of its constituent securities in a similar proportion to their weightings in the Reference Index.

The methodology of the Reference Index applies exclusion criteria to exclude companies that are deemed by the index provider not compliant and in violation of international norms and standards, identified to have a severe controversy rating, engaged from a business involvement perspective in certain harmful activities and products, and identified to have a severe ESG risk rating. Where Sustainalytics data for a company is not available to complete an assessment for involvement in the above-mentioned activities, the company will not be eligible for inclusion in the Reference Index. The Index Provider then determines, through qualitative analysis, a company's eligibility for inclusion in the Reference Index based on its involvement in business activities that focus on the following hydrogen economy Sectors (as further described in the Supplement of the Fund):

1. Fuel cells
2. Green hydrogen
3. Hydrogen generation
4. Hydrogen storage
5. Hydrogen in transportation
6. Hydrogen Innovation

The index methodology of the Reference Index includes good governance criteria whereby companies are assessed against indicators such as sound management structures, employee relations, remuneration of staff and tax compliance. Companies that are deemed not to meet good governance practices according to the methodology of the Reference Index will be excluded.

In addition to the assessment of good governance practices of companies by the Index Provider, the Investment Manager also implements a review of the constituents of the Reference Index at each rebalance to identify any gaps from a data coverage perspective in the methodology of the Reference Index. In the unlikely event that a company is not assessed in relation to good governance practices by the Index Provider, the Investment Manager implements an internal process to review publicly available data and perform checks against UN Global Compact principles to verify that those companies follow good governance practices.

Proportion of investments

A minimum of 90% of the Fund's NAV will be selected according to the binding elements of the investment strategy, on the basis that they align with the sustainable investment objective of the Fund.

Up to 10% of the Fund's NAV will be invested in financial derivative instruments for hedging and/or efficient portfolio management purposes and cash for ancillary liquidity purposes.

Monitoring of sustainable investment objective

As the Fund achieves the sustainable investment objective by tracking the Reference Index, the Manager will monitor the Fund's ability to track the Reference Index in line with the investment strategy of the Fund. The Manager monitors the tracking error of the Fund (being the standard deviation of the difference in returns between the fund and the reference index) throughout the lifecycle of the Fund to ensure that this is within the limits as set out in the Supplement.

The Manager also monitors the following indicators on a monthly basis:

- the Fund's ESG score
- the Fund's ESG rating
- the carbon intensity of the Fund
- the Fund's exclusion criteria

Methodologies

The Manager aggregates data from the index provider, and third party data providers such as MSCI and Sustainalytics in order to monitor the indicators and measure the fund's attainment of the sustainable investment objective. The Manager compares the indicators against the same indicators for the Reference Index tracked by the fund to ensure consistency.

Data sources and processing

As the Fund is passively-managed, the Fund attains the sustainable investment objective by tracking the Reference Index. The Manager uses index composition data as disseminated by the index provider to implement the investment strategy. In order to assess the quality of the index provider's data, initial due diligence is carried out on the index providers prior to fund launch and periodically thereafter and the Manager ensures the index provider is a Benchmark Administrator on the ESMA register that is maintained in accordance with Article 36 of the Benchmark Regulation, or is in the process of applying for inclusion on the ESMA Register or approved by endorsement or recognition by a Member State competent authority. Thereafter, the Manager conducts periodic reviews of the index providers' controls for monitoring of the data quality and the correct implementation of the index methodologies. The Manager also uses data sourced from other third parties (e.g. Sustainalytics and MSCI) for comparison purposes in order to identify and challenge any potential inconsistencies. The Manager does not estimate any of the data or use any estimated data from third party data providers.

Limitations to methodologies and data

Methodologies

There may be insufficient data coverage by third party data providers for certain issuers. In such circumstances, the ability of the Manager to perform monitoring and measurement of the sustainable investment objective of the Fund may be impaired.

The Manager will monitor the attainment of the sustainable investment objective of the Fund (as described under the section 'Monitoring of sustainable investment objective'), however, the Manager does not independently verify an issuer's eligibility for inclusion in the Reference Index and is reliant on the data, research and expertise of the index provider to select the issuers in accordance with the methodology of the Reference Index. The index provider is subject to initial and ongoing due diligence checks by the Manager to verify their skill and expertise (please refer to the section titled 'Due Diligence').

These limitations do not impact on the Fund's ability to achieve its objective of tracking the Reference as the Fund utilises the index composition data disseminated by the index provider to attain the sustainable investment objective of the Fund.

Derivatives and cash

Currently the Investment Manager does not apply any minimum environmental or social safeguards to financial derivative instruments for hedging and/or efficient portfolio management purposes and cash for ancillary liquidity.

Data

To meet the stated investment objective and policy of the Fund, the Company, the Manager and/or the Investment Manager (together "Invesco") may rely on financial, economic, environmental and other data made available by companies, index providers, governmental agencies, rating agencies, exchanges, professional services firms, central banks or other third-party providers (the "external data providers").

The Fund passively replicates the Reference Index and the primary source of third-party data is the index composition as disseminated by the index provider. Invesco may also use third-party data from other sources besides an index provider. Invesco ensures that each index provider is a Benchmark Administrator on the ESMA register that is maintained in accordance with Article 36 of the Benchmark Regulation, or is in the process of applying for inclusion on the ESMA Register or approved by endorsement or recognition by a Member State competent authority.

Invesco performs due diligence on index providers and has internal controls to monitor constituent data (please refer to the sections "Data sources and processing" and "Due diligence"), however Invesco may not in all cases be able to verify the integrity of third party data used in the index construction. In placing reliance on external data providers there may be risks associated with errors in third party data. Such errors may be undetectable by either Invesco or the index provider and can result in holdings weightings that are inconsistent with the stated methodology of the index and/or the investment objective and/or policy of the fund. The Funds could incur unexpected costs as a result such errors, for which losses Invesco and external data providers, acting in good faith, will not be held liable.

Where errors in third party data are identified, as the investment objective of the Fund is to track the index, the Fund may continue to hold investments that are inconsistent with the stated investment policy, or sustainable investments of the Fund, until such time that the data is corrected or, where the error has impacted the composition of the Reference Index, until the index provider rebalances the Reference Index. This applies to ESG data which may not only impact the Fund's holdings but also the reporting done by the Investment Manager on the Fund's ESG characteristics as required under relevant regulation.

Due diligence

Invesco carries out due diligence on index providers and ensures that each index provider is included on the ESMA register that is maintained in accordance with Article 36 of the Benchmark Regulation, or is in the process of applying for inclusion on the ESMA Register or approved by endorsement or recognition by a Member State competent authority.

Prior to launching a new ETF, the Investment Manager carries out due diligence on the Reference Index by assessing the index methodology to determine whether it will achieve the desired investment outcome and the sustainable investment objective of the Fund. This includes, but is not limited to, analysis of the investment universe of potential securities (and in particular the degree of coverage by third-party ESG data providers), the exclusionary criteria applied (e.g. business involvements, controversies, UNGC alignment, minimum ESG scores), the security weighting methodology, the overall improvement achieved in the ESG and climate characteristics of the benchmark relative to an unadjusted benchmark, and the degree of tracking between the index and the unadjusted benchmark.

Engagement policies

At Invesco, we take our responsibility to act as active owners very seriously and see engagement as an opportunity to encourage corporate improvement and positive change of our investee companies and entities. Engagement with companies and proxy voting play a fundamental role in our efforts to help manage, protect, and enhance the value of our clients' investments. Invesco leverages the engagement activities led by Invesco's ESG Team and works collaboratively with our ESG research analysts to set engagement objectives and opportunities.

Equity shares held in Invesco ETFs are included as part of Invesco's overall share ownership and relationship with investee companies through direct engagement or collaboratively through investor organisations. This is particularly relevant in regards to ESG related issues, where we can draw on Invesco's leadership and collective ESG engagement power to command companies' attention and use our influence to encourage stronger ESG related behaviour from the firms and entities in which we invest. For more on our ESG engagement approach and objectives, please see our Invesco Stewardship Report at www.invesco.com.

Attainment of the sustainable investment objective

An index has been designated as a reference benchmark to meet the sustainable investment objective of the fund.

The Reference Index has been selected on the basis that it aligns with the sustainable investment objective of the Fund, which is to invest in companies whose innovative technologies focus on advancing the use of hydrogen, fuel cells and the potential hydrogen economy hence facilitating a transition to a lower carbon economy.

For information on the input data, the methodologies used to select those data, the rebalancing methodologies and how the reference index is calculated, please refer to the index provider's website: <https://www.solactive.com/>
