The Index is comprised of securities in the form of equities and is constructed from the MSCI Europe Index (the "Parent Index"). The Index aims to target sector weights that reflect the relative sector weights of the Parent Index to limit the systematic risk introduced by the ESG selection process. The Index excludes companies showing involvement in the following activities: controversial weapons, civilian firearms, nuclear weapons, tobacco, alcohol, gambling, genetically modified organisms, nuclear power, and thermal coal. The Index also excludes companies that are considered not to be in accordance with Catholic Principles as evaluated based on their involvement in the following activities: stem cells, adult entertainment, conventional weapons, abortion, contraceptives, animal testing and failing to comply with the United Nations guiding principles for business and human rights. The remaining securities in the Index are weighted in proportion to their free float-adjusted market capitalisation. The MSCI 10/40 Indexes methodology is applied to securities which qualify for inclusion in the Index such that the weight of any single group entity is capped at 10% and the sum of all group entities with a weight of more than 5% is capped at a maximum of 40%. The Index is rebalanced on a quarterly basis.
