Investment objective

The Invesco EQQQ NASDAQ-100 UCITS ETF (CHF Hdg Acc) aims to provide investors with investment results which, before expenses, correspond to the price and yield performance of the NASDAQ-100 Notional Net Total Return Index (a modified market capitalisation weighted index) in US dollar terms by holding, as far as practicable, all of the Index's constituents in their respective weighting. The portfolio follows the Index's quarterly rebalance and annual review. To minimise exposure to fluctuations in the exchange rate between USD and CHF, the CHF Hedged share class enters into foreign exchange transactions (typically short dated currency forwards, with the hedge reset daily to 100% of NAV). Please note that, prior to 29 May 2018, the name of this product was PowerShares EQQQ NASDAQ-100 UCITS ETF (CHF Hdg Acc).

Benchmark index description

The NASDAQ-100 Index includes 100 of the largest US and international non-financial securities listed on The NASDAQ Stock Market® (NASDAQ®) based on market capitalisation. The index reflects companies across major industry groups including computer hardware and software, telecommunications, retail/wholesale trade and biotechnology. It does not contain securities of financial companies including investment companies. On 5 April 2011, NASDAQ OMX announced that the NASDAQ-100 Index would undergo a Special Rebalance in order to bring the weights of the index securities closer in line with their actual market capitalisations.

Performance of CHF 10,000 since 30 November 2017

Past performance is not a guide to future returns. Source: Invesco, Bloomberg L.P., FactSet. ETF performance shown is calculated with reference to the Net Asset Value, inclusive of net reinvested income and net of ongoing charges and portfolio transaction costs, in CHF. The figures do not reflect the actual share price, the impact of the bid/offer spread or broker commissions. ETF NAV performance differs from that of the index due to the ongoing charges and portfolio transaction costs and due to the fact that the ETF does not necessarily always hold all the securities in the index in their respective weighting.
