Investment objective

The Invesco S&P 500 High Dividend Low Volatility UCITS ETF (CHF Hdg Acc) aims to provide investors with investment results which, before expenses, correspond to the price and yield performance of the S&P 500® Low Volatility High Dividend Net Total Return Index (a dual-factor index) in US dollar terms by holding, as far as practicable, all of the Index's constituents in their respective weighting. The index constituent universe is reviewed twice a year in January and July. To minimise exposure to fluctuations in the exchange rate between USD and CHF, the CHF Hedged share class enters into foreign exchange transactions (typically short dated currency forwards, with the hedge reset daily to 100% of NAV). Please note that, prior to 29 May 2018, the name of this product was PowerShares S&P 500 High Dividend Low Volatility UCITS ETF (CHF Hdg Acc).

Benchmark index description

The S&P 500 Low Volatility High Dividend Index ("the benchmark") measures the performance of the 50 least-volatile high dividend-yielding stocks in the S&P 500 Index while meeting diversification, volatility and tradability requirements (achieve a balance between dividend yield and volatility). All S&P 500 Index constituents are ranked in descending order of trailing 12 months dividend yields. The top 75 stocks are selected and the number of stocks per GICS® sector² is capped at 10. The 50 lowest realised volatility stocks are selected and weighted by dividend yield (each constituent is capped at 3% and each GICS sector is capped at 25%).

Past performance is not a guide to future returns. Source: Invesco, Bloomberg L.P., Factset. ETF performance shown is calculated with reference to the Net Asset Value, inclusive of net reinvested income and net of ongoing charges and portfolio transaction costs, in CHF. The figures do not reflect the actual share price, the impact of the bid/offer spread or broker commissions.

ETF NAV performance differs from that of the index due to the ongoing charges and portfolio transaction costs and due to the fact that the ETF does not necessarily always hold all the securities in the index in their respective weighting.

Risk warnings

The value of investments and any income will fluctuate (this may partly be the result of exchange rate fluctuations) and investors may not get back the full amount invested.

In tracking the Index, the ETF may be concentrated from time to time in a small number of sectors. ETF investors should be prepared to accept a higher degree of risk than for an ETF that is more widely diversified across different sectors.
