Benchmark index	S&P 500 [®] Low Volatility High Dividend Net Total Return Index

Investment objective

The Invesco S&P 500 High Dividend Low Volatility UCITS ETF aims to provide investors with investment results which, before expenses, correspond to the price and yield performance of the S&P 500[®] Low Volatility High Dividend Net Total Return Index (a dual-factor index) in US dollar terms by holding, as far as practicable, all of the Index's constituents in their respective weighting. The index constituent universe is reviewed twice a year in January and July. Please note that, prior to 29 May 2018, the name of this product was PowerShares S&P 500 High Dividend Low Volatility UCITS ETF.

Benchmark index description

The S&P 500 Low Volatility High Dividend Index ("the benchmark") measures the performance of the 50 least-volatile high dividend-yielding stocks in the S&P 500 Index while meeting diversification, volatility and tradability requirements (achieve a balance between dividend yield and volatility). All S&P 500 Index constituents are ranked in descending order of trailing 12 months dividend yields. The top 75 stocks are selected and the number of stocks per GICS[®] sector³ is capped at 10. The 50 lowest realised volatility stocks are selected and weighted by dividend yield (each constituent is capped at 3% and each GICS sector is capped at 25%).

ETF NAV performance (%)

Cumulative performance

	3 months	1 year	3 years	5 years	Since inception
Invesco S&P 500 High Dividend Low Volatility UCITS ETF	-2.61	0.93	33.31	-	37.20
S&P 500 Low Volatility High Dividend NTR Index	-2.71	0.54	31.91	-	35.62
S&P 500 Net Index	-3.39	6.73	36.16	-	35.39

Annual performance

	2017	2016	2015	2014	2013
Invesco S&P 500 High Dividend Low Volatility UCITS ETF	11.36	21.43	-	-	-
S&P 500 Low Volatility High Dividend NTR Index	10.97	21.15	-	-	-

Performance of USD 10,000 since 31 May 2015

Past performance is not a guide to future returns. Source: Invesco, Bloomberg L.P., Factset. ETF performance shown is calculated with reference to the Net Asset Value, inclusive of net reinvested income and net of ongoing charges and portfolio transaction costs, in USD. The figures do not reflect the actual share price, the impact of the bid/offer spread or broker commissions.

ETF NAV performance differs from that of the index due to the ongoing charges and portfolio transaction costs and due to the fact that the ETF does not necessarily always hold all the securities in the index in their respective weighting.

Risk warnings

The value of investments and any income will fluctuate (this may partly be the result of exchange rate fluctuations) and investors may not get back the full amount invested.

In tracking the Index, the ETF may be concentrated from time to time in a small number of sectors. ETF investors should be prepared to accept a higher degree of risk than for an ETF that is more widely diversified across different sectors.

When making an investment in an ETF you are buying shares in a company that is listed on a stock exchange.

It is expected that the shares of the ETF will trade closely to its Net Asset Value (NAV), and because of the exchange-traded fund structure, that a significant discount or premium to the NAV will not be sustained over the long term. However, supply of, and demand for, the shares on the relevant exchange together with any disruptions to creations and redemptions of units in the underlying fund may result in share prices that differ significantly from the NAV and there can be no certainty that there will be liquidity in the shares on any exchange. Only Authorised Participants, as defined in the Prospectus of the ETF, can request the Manager to create and redeem units in the underlying fund.

Important information

¹ The ongoing charges figure is based on annualised expenses. It excludes portfolio transaction costs.

² The ETF will, as far practicable, hold all the securities in the index in their respective weighting.

³ Global Industry Classification Standard (GICS). The GICS structure consists of 11 sectors, 24 industry groups, 68 industries and 157 sub-industries into which S&P and MSCI have categorised all major public companies.

⁴ The Historic Yield reflects the distributions declared over the past twelve months as a percentage of the NAV at the beginning of the next period. Investors may be subject to tax on their distributions.
